DISCLAIMER

Atlas E.R, Inc. will not be held financially liable for any errors or omissions that may occur in the Atlas E.R. Regulatory Data Report as a result of the information obtained from the Environmental Protection Agency (EPA), Texas Commission on Environmental Quality (TCEQ) or other Local / State / Federal Government Agencies. All information in this report has been obtained from local, state and/or federal publicly available databases and is presented "as is." This information may be inaccurate and/or incomplete. Certain errors within these databases may prevent a site from geocoding or even from being manually pointed on the map. For these reasons, it is recommended that all data received be field verified and that the area of review be field surveyed to help ensure that no sites are overlooked in the due diligence process.

ATLAS ENVIRONMENTAL RESEARCH DATABASE SUMMARY

INSTITUTIONAL / ENGINEERING CONTROLS - ACTIVITY AND USE LIMITATIONS (AULs)

Several databases reviewed for this report contain information on controls and/or AULs. When available, this information is displayed for sites within the area of review. No comprehensive database of controls / AULs currently exists. For this reason, it is recommended that a review of local land records be completed to determine if other controls / AULs exist for the area of concern.

LOCATION UNKNOWN SITES (LUs)

Extensive effort is made to ensure that as many sites as possible are geocoded or manually pointed for an Atlas E.R. Regulatory Data Report. However, due to inaccurate and /or insufficient information within a particular database, some sites cannot be accurately located and may be noted as "LU" in this report. These sites will not appear on the map, but database information has been included in the report. These sites may or may not be within the area but are submitted for your review.

INCIDENT

NRS ID	553361
LOCATION	MARKET ST, CHANNELVIEW, TX
COUNTY	HARRIS
INCIDENT TYPE	VESSEL
INCIDENT CAUSE	OTHER
INCIDENT DATE	01/12/01
AFFECTED MEDIUM	WATER, LOST LAKE
DESCRIPTION OF INCIDENT	THE MATERIAL WAS RELEASED FROM A VESSEL ON THE STARBOARD NUMBER ONE COMPARTMENT DUE TO CRACK IN THE SIDE OF THE BARGE.
ADDITIONAL INFORMATION	THE CALLER PLANS TO NOTIFY THE EPA. CALLER STATED THE MATERIAL IS EVAPORATING QUICKLY.

Location Unknown

DATABASE DEFINITIONS

Aerometric Information Retrieval System (AIRS)

Under the provisions of the Clean Air Act (CAA), the EPA sets limits on how much of a pollutant can be in the air anywhere in the United States. The AIRS database provides air monitoring data: ambient concentrations of criteria air pollutants at monitoring sites, primarily in cities and towns throughout the 50 United States, plus the District of Columbia, Puerto Rico, and the Virgin Islands. This database contains basic site information and emissions data for EPA criteria pollutants.

Brownfields Site Assessments (BSA)

This database is maintained by the Texas Commission on Environmental Quality (TCEQ) as part of the Brownfields Redevelopment Initiative program. This program provides for the cleanup of contaminated brownfield properties to aid in transferability and revitalization. The brownfields in this database have been given funding for site assessments and / or redevelopment. This database contains basic site information, contaminate categories, affected media, and other applicant information. Other information is often available from the files located in TCEQ Central Records - Austin. These files can be obtained and/or researched by Atlas Environmental Research at your request. See <http://www.tceq.state.tx.us> for more information.

Comprehensive Environmental Response, Compensation & Liability Information System (CERCLIS)

The CERCLIS Database is the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Database that contains information on hazardous waste sites, potentially hazardous waste sites and remedial activities across the nation. The database includes sites that are on the National Priorities List (NPL) or are being considered for the NPL. More information can be obtained on the EPA's website at www.epa.gov.

Closed & Abandoned Landfill Inventory (CLI)

This database was originally obtained by Atlas E.R., Inc. in October 2003. The information contained within this database was collected by the TNRCC (TCEQ) under contract with Southwest Texas State University (Texas State University) under authorization by Texas House Bill 2537 beginning in 1993 and continuing through the present. After the initial inventory by the TNRCC (TCEQ) and Southwest Texas State University (Texas State University), the information was passed on to the regional councils of governments (COGs). The COGs are required under House Bill 2537 to include an inventory of closed municipal solid waste landfills in their regional plans for solid waste management. These requirements are referenced in the Texas Health and Safety Code, Chapter 363.064. Other information is often available from the Landfill files located in TCEQ Central Records - Austin. These files can be obtained and/or researched by Atlas Environmental Research at your request. See <http://www.tceq.state.tx.us> for more information.

Current Spill Response (CSPILLS)

Information in this database is provided by the Texas Commission on Environmental Quality (TCEQ). It details environmental incidents that have been reported to the TCEQ. It may include citizen complaints pertaining to environmental problems or spills, discharges, or releases that may cause pollution and which may or may not have required an emergency response.

DATABASE DEFINITIONS

Dry Cleaner Registration (DC)

Title 30, Chapter 337 of the Texas Administrative Code requires all dry cleaning drop stations and facilities in Texas to register with the TCEQ and implement new performance standards at their facilities as appropriate. This database includes basic site information on dry cleaning drop stations and facilities registered with the Texas Commission on Environmental Quality.

Delisted National Priority List (DNPL)

This database contains sites that were originally on the EPA National Priority List. They have been deleted or "delisted" because remedial action has been completed as ordered by the EPA.

Deleted State Superfund (DSUPER)

These sites were once listed in the state Superfund database, but have been deleted.

Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is an archived database that stores information on notifications of oil discharges and hazardous substances releases through the year 2000. ERNS provides the most comprehensive data compiled on notifications of oil discharges and hazardous substance releases in the United States from 1986 - 2000. During its use, more than 275,000 release notifications were entered into ERNS. In mid-2000, the EPA began phasing out their responsibility for maintaining the ERNS database and turning over full control to the National Response Center (NRC). The database was redesigned and renamed the National Response System (NRS). The NRC is now the sole federal point of contact for reporting oil and chemical spills and the NRS is now the most comprehensive source of data compiled on notification of oil and chemical spills from the year 2000 to present. More information is available at <http://www.nrc.uscg.mil>.

Note: ASTM E1527-05 3.2.65 states that records which "do not have adequate address information to be located geographically are not generally considered practically reviewable." It also states that the information being reviewed "shall be such that the user can review the records for a limited geographic area" and that the information is not "practically reviewable unless they can be obtained from the source agency in the smaller geographic area of zip codes."

If the address, zip code, county, or other location fields in the ERNS/NRS database are blank, then that particular discharge or release record may not be included in the Atlas E.R. Regulatory Data Report.

Historic Spill Response (HSPILLS)

Information in this database is provided by the Texas Commission on Environmental Quality (TCEQ). It details environmental incidents that have been reported to the TCEQ. It may include citizen complaints pertaining to environmental problems or spills, discharges, or releases that may cause pollution and which may or may not have required an emergency response.

DATABASE DEFINITIONS

Institutional / Engineering Controls - Atlas Environmental Research (IECAER)

Institutional and engineering controls obtained from multiple sources including, but not limited to, environmental databases and facility files. This proprietary database is updated at irregular intervals and is not intended to be a complete listing of controls or activity & use limitations (AULs). A complete review of local land records for the area of concern is recommended to determine other potential controls or AULs.

Institutional / Engineering Controls - Environmental Protection Agency (IECEPA)

Obtained from the EPA, this database highlights facilities that have either "institutional controls" or "engineering controls". This database is updated at irregular intervals and is not intended to be a complete listing of controls or activity & use limitations (AULs). A complete review of local land records for the area of concern is recommended to determine other potential controls or AULs.

Industrial Hazardous Waste (IHW)

Facilities which store, process, or dispose of hazardous waste (except where such storage and/or processing is excluded from permit requirements in accordance with 30 Texas Administrative Code (TAC) Section 335) must obtain a permit pursuant to the Texas Solid Waste Disposal Act. This database is maintained by the Industrial and Hazardous Waste Permits Section of the TCEQ. It includes ownership details and facility information for industrial hazardous waste sites. Industrial waste is waste that results from or is incidental to operations of industry, manufacturing, mining, or agriculture. Hazardous waste is any solid waste that possesses one or more hazardous characteristics as defined in federal waste regulations.

American Indian Reservations (INDRES)

The Department of Interior and Bureau of Indian Affairs maintains this database. It includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

Innocent Owner / Operator (IOP)

The Texas Innocent Owner / Operator Program (IOP) was created by House Bill 2776 of the 75th Legislature, and provides a certificate to an innocent owner or operator, under the Texas Health and Safety Code or Water Code, if their property has become contaminated as a result of a release or migration of contaminants from a source or sources not located on the property, and they did not cause or contribute to the source or sources of contamination. Like the VCP, the IOP can be used as a redevelopment tool or as a way to add value to a contaminated property by providing a certificate that confirms an innocent owner or operator is entitled to immunity from liability. This database is maintained by the Texas Commission on Environmental Quality (TCEQ). It contains basis site information, contaminate categories, affected media, and other applicant and consultant contact information. Other information is often available from the files located in TCEQ Central Records - Austin. These files can be obtained and/or researched by Atlas Environmental Research at your request. See <http://www.tceq.state.tx.us> for more information.

Leaking Petroleum Storage Tanks (LPST)

This database is maintained by the Texas Commission on Environmental Quality (TCEQ) - Petroleum Storage Tank Division. It contains summary information about leaking tanks reported to the commission

DATABASE DEFINITIONS

such as identification numbers, location information, responsible party information, and priority and status codes. Other information, including maps of monitor wells, subsurface information, and contaminant data is often available in report format from the LPST file located in TCEQ Central Records - Austin. These files can be obtained and/or researched by Atlas Environmental Research at your request. See <http://www.tceq.state.tx.us> for more information.

Municipal Setting Designation (MSD)

An MSD is an official state designation given to property within a municipality or its extraterritorial jurisdiction that certifies that designated groundwater at the property is not used as potable water, and is prohibited from future use as potable water because that groundwater is contaminated in excess of the applicable potable-water protective concentration level. The prohibition must be in the form of a city ordinance, or a restrictive covenant that is enforceable by the city and filed in the property records.

Municipal Solid Waste Landfills (MSWLF)

This database is maintained by the Texas Commission on Environmental Quality (TCEQ) - Municipal Solid Waste Division. It contains summary information about landfills permitted by the commission such as identification numbers, location information, applicant / owner information, and site characteristics / status. Other information is often available from the Landfill files located in TCEQ Central Records - Austin. These files can be obtained and/or researched by Atlas Environmental Research at your request. See <http://www.tceq.state.tx.us> for more information.

No Further Remedial Action Planned (NFRAP)

Archive (NFRAP) sites have been removed and archived from the CERCLIS inventory. This designation means that to the best of the EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the NPL, unless information indicates that this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site. It only means that based upon available information, the location is not judged to be a potential NPL site. This database contains the same fields and information as CERCLIS. More about NFRAP can be found on the internet at <http://www.epa.gov>.

National Priority List (NPL)

The NPL serves primarily informational purposes, identifying for the States and the public those sites or other releases that appear to warrant remedial actions. Section 105(a)(8)(B) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, requires that the statutory criteria provided by the Hazardous Ranking System (HRS) be used to prepare a list of national priorities among the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States. Sites that are placed on the National Priorities List are also known as Superfund sites and are considered priorities for State and Federal cleanup efforts. Information concerning NPL sites is maintained by the EPA - Office of Emergency and Remedial Response. More about the NPL / Superfund program can be found on the internet at <http://www.epa.gov>.

DATABASE DEFINITIONS

National Response System (NRS)

See ERNS Database.

Open Dump Inventory (ODI)

An open dump is defined as a disposal facility that does not comply with RCRA Subtitle D, Part 257 or 258 Criteria. All states are required by law to inventory sites which do not comply with these criteria and are required to submit them to the EPA for inclusion in the Open Dump Inventory.

Proposed National Priority List (PNPL)

A site that has been proposed by the Environmental Protection Agency for listing on the National Priority List.

Petroleum Storage Tanks (PST)

This information is maintained by the Texas Commission on Environmental Quality (TCEQ) - Petroleum Storage Tank Division. It has been retrieved from the TCEQ's TRACS PST System. Facility, owner, operator, and specific tank information is maintained within nine files in this system. These files contain information on above / underground storage tanks that have been registered with the TCEQ. Owner and facility address and contact name information has been extracted for all tanks in this database. Specific tank data such as status, installation date, capacity, construction, and contents has been included in this report. See <http://www.tceq.state.tx.us> for more information.

Proposed State Superfund (PSUPER)

These sites have been proposed for inclusion in the state Superfund database.

Resource Conservation & Recovery Act (RCRA)

This database was obtained from the Environmental Protection Agency. RCRAInfo is a national program management and inventory system of RCRA (Resource Conservation and Recovery Act) hazardous waste handlers. Handlers can be characterized as either Treatment, Storage, Disposal, and Combustion Facilities (TSD's), Generators (Large Quantity, Small Quantity, or Conditionally Exempt), or Transporters. RCRIS captures identification and location data for all handlers and a wide range of information on TSDs regarding permit/closure status, compliance with Federal and State regulations, and cleanup activities. Information regarding state and/or federal evaluations, violations, and enforcement actions is also maintained within RCRISInfo. More about RCRISInfo can be found on the internet at <http://www.epa.gov>.

Record Of Decision System (RODS)

The Record of Decision (ROD) is a public document that explains which cleanup alternatives will be used to clean up an NPL site. A ROD provides the justification for the remedial action chosen at an NPL site. It also contains site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, scope and role of response action and the remedy selected for cleanup.

DATABASE DEFINITIONS

State Superfund (SUPER)

The Texas Commission on Environmental Quality (TCEQ) is required under the Texas Solid Waste Disposal Act, Texas Health and Safety Code Chapter 361, as amended, to identify and assess facilities that may constitute an imminent and substantial endangerment to public health and safety or the environment due to a release or threatened release of hazardous substances into the environment. Information on State Superfund Sites is maintained by the TCEQ - Pollution Cleanup Division. More information is available on the internet at <http://www.tceq.state.tx.us>. Additional information on each site in the Atlas E.R. Regulatory Data Report is available from TCEQ Central Records - Austin. This information can be obtained and/or researched by Atlas Environmental Research at your request.

Tribal Registered Storage Tanks (TRST)

This database contains basic information on registered storage tanks and leaking registered storage tanks that store or have stored petroleum or hazardous substances. These tanks are located on tribal lands throughout the United States.

Voluntary Cleanup Program (VCP)

This database is maintained by the Texas Commission on Environmental Quality (TCEQ) - Pollution Cleanup Division. It contains basic site information, contaminate categories, affected media, and other applicant and consultant contact information. Other information is often available from the VCP files located in TCEQ Central Records - Austin. These files can be obtained and/or researched by Atlas Environmental Research at your request. The Texas Voluntary Cleanup Program (VCP) provides administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in Texas. Since all non-responsible parties, including future lenders and landowners, receive protection from liability to the state of Texas for cleanup of sites under the VCP, most of the constraints for completing real estate transactions at those sites are eliminated. As a result, many unused or under used properties may be restored to economically productive or community beneficial use. Also under the VCP, site cleanups follow a streamlined approach to reduce future human and environmental risk to safe levels. Any site not subject to an order or permit from the TCEQ is eligible to enter the VCP, except in cases where TCEQ enforcement action is pending. Parties entering the VCP must submit an application, an environmental site assessment describing the contaminated area of concern, and an application fee. Upon acceptance of the application, the applicant must sign an agreement that describes a schedule of events necessary to achieve cleanup and confirms that the applicant has agreed to pay all VCP oversight costs. After completion of the cleanup, the parties will receive a certificate of completion from the TCEQ, which states that all non-responsible parties are released from all liability to the state for cleanup of areas covered by the certificate. Parties may terminate their participation in the VCP at any time by written notice. See <http://www.tceq.state.tx.us> for more information.
